Research Focus

Robotics in system modeling, control, dynamics, physical-based simulation, constrained optimization, haptic teleoperation and mechatronics, in particular autonomy for manipulation, surgical and biomedical applications.

Bio

Fei is a postdoctoral researcher at the Contextual Robotics Institute at University of California San Diego (UCSD). He is currently working on robotic autonomy for manipulation, surgical and biomedical applications, with semantic modeling, real-to-sim simulation, and advanced control techniques. Before that, he served as a research associate and postdoctoral scholar both at the Biorobotics Institute at Scuola Superiore Sant'Anna (SSSA), and the Center for Micro-BioRobotics at Italian Institute of Technology (IIT) in Italy. He finished his Ph.D. at Laboratory Ampère at INSA de Lyon, a top French grande école and engineering university. Right after his PhD dissertation, he also worked for a start-up company (ROBO Medical Co., Ltd.), as a senior control engineer and project manager for the creation of a robot for endoscopic submucosal dissection (ESD) surgery. During the last few years, he has experiences in several robotic areas, including modeling, control, dynamics, planning, simulation, and optimization. I also have knowledge of sensor perception, signal processing, and computer vision. He has authored a number of journal and conference papers that have advanced and impacted on both the academic and industrial worlds.
